

Amdro® Granular Ant Bait Insecticide

An effective granular bait insecticide that eliminates ants the only sure way - by eliminating the Queen

General description

Amdro® Granular Ant Bait is an effective granular ant bait insecticide that controls ants quickly and effectively.

Amdro® Granular Ant Bait is carried by worker ants into the nest as food for the colony where it is eaten and fed to the queen, achieving complete colony elimination. **Amdro® Granular Ant Bait** is highly attractive to specific ant species, namely the Singapore Ant, Coastal Brown Ant, Tropical Fire Ant (Ginger Ant), Red Imported Fire Ant and Green-head Ant. **Amdro® Granular Ant Bait** can be used almost anywhere, and is approved for use on gardens, lawns, parks, golf courses, sports grounds, driveways, paths, patios and other non-crop land.

No queen. No colony

While the queen ant lives, the colony can be rebuilt. **Amdro® Granular Ant Bait** is carried back into the nest as food and shared with other ants, including the queen. This ensures control of the whole ant colony. While fast acting to ants, **Amdro® Granular Ant Bait** has a relatively low toxicity to humans and other mammals. **Amdro® Granular Ant Bait** is effective against specific destructive ant species, namely Singapore Ant, Coastal Brown Ant, Tropical Fire Ant (Ginger Ant), Red Imported Fire Ant and Green-head Ant. It is important to be able to recognise these ants, because **Amdro® Granular Ant Bait** has been designed to be attractive to them. Other species have different food preferences and may not be attracted to the bait. For example, **Amdro® Granular Ant Bait** will not control Black House Ant or Argentine Ants.

Features

Benefits

Highly palatable bait matrix attractive to target species

Bait is brought back to the colony to ensure total control, including the queen.

Low toxicity to non-targets

Amdro® Granular Ant Bait can be used in sensitive areas where traditional insecticide sprays are not suitable.

Powerful on target ants

Only a small amount of bait is required to effectively control ants, including the queen.

Effective use for the greatest value

Amdro® Granular Ant Bait can be used almost anywhere, and is approved for use on gardens, lawns, parks, golf courses, sports grounds, driveways, paths, patios and other non-crop land. **Amdro® Granular Ant Bait** should be used when ants are actively foraging for food. Early season treatment will control ant colonies while they are establishing and before they are large enough to be a serious problem. **Amdro® Granular Ant Bait** should not be applied to wet ground, or if rain is expected, as the granules deteriorate in moist conditions. **Amdro® Granular Ant Bait** should be applied at a rate of 5 grams per 20 square metres.

Amdro® Granular Ant Bait

Insecticide

Situation	Pest	Rate	Critical Comments
Gardens, golf courses, Industrial areas, Lawns, Parks, Turf, Sports grounds and other non-crop land and nonfood bearing nursery stock	Singapore ant (<i>Monomorium destructor</i>) Costal brown ant (<i>Pheidole megacephala</i>) Tropical fire and or Ginger ant (<i>Solenopsis geminata</i>) Greenhead ant (<i>Rhytidoponera spp</i>) Red imported fire ant (<i>Solenopsis invicta</i>)	2.5 kg/ha or 5g/20m2	Broadcast method (all ant types): Evenly distribute granules over infested area using a hand held rotary granule spreader or equivalent applicator or gloved hand. Individual mound treatments (Red imported fire ant): This treatment method should be used when fast control is required, desirable ant species are present throughout the treatment area and there are less than 50 fire ant nests or colonies per hectare. Sprinkle 50g (approximately 5 tablespoons) of product immediately around each mound. Apply in late afternoon when ants are active. Re-treat when ant activity becomes troublesome again. See GENERAL INSTRUCTIONS on label for description of ants.

Packaging

Pack size 454g.
